

QUALITY STATEMENT

Curo Alkaline Water is committed to providing customer satisfaction by:

- Providing the highest quality, supply and delivery of food safe natural alkaline mineral water.
- Ensuring consistent and uninterrupted supply and delivery of food safe natural alkaline mineral water.
- Continuously improving processes and standards to ensure that the highest food quality and food safety of natural alkaline mineral water delivery and supply levels are achieved.
- Exceeding the FSANZ, Australian Drinking Water Guidelines and NSW Food Authority food standards for the bottling, delivery and supply of natural alkaline mineral water.

Curo Alkaline Water conforms at all times to the Food Standards Australia New Zealand (FSANZ) Food Code, which regulates "food standards", the Australian Drinking Water Guidelines (2011), Version 3.2, Updated Feb 2016 and the NSW Food Authority requirements.

Curo Alkaline Water manages the food safety and quality of the product with a quality control system that comprises a strict monitoring regime and a Food Safety Plan that documents all operations in the selection of suppliers, procurement, shipping and delivery of bottled natural alkaline mineral water.

Our quality system includes a HACCP based Food Safety and Quality Management Program, based on the International CODEX standards for HACCP, which is used to manage the processes at all stages of the operation.

Our natural alkaline mineral water is sourced only from an independently certified, reputable Underground natural limestone cavern source situated by the protected national park in the western foothills of the Blue Mountains.

Our natural alkaline mineral water is carefully protected at all stages from the source to the final customer with up to date processing and sanitising equipment and an approved skilled, trained team.

We regularly review our system for continuous improvement and appropriateness with internal and external auditing.
